

# M-FX

## Benefits

- Works with any Total Station
- Shoot and store data on your Pocket PC
- Bluetooth compatible
- Take shots with your Pocket PC
- Instant preview of points
- Diagramming capability

M - FX is a very powerful but easy to use data collector for use with any total station measuring system from Nikon, Sokkia, Topcon, or Leica. Control your total station with M-FX, take shots and see the measurement points form a diagram as you shoot, giving you an instant preview of the scene allowing you to see errors instantly.

Then simply complete your FX3 diagram, analyse the dynamics of the crash or crime, and animate the incident with the powerful FX3 RealMotion 3D animation component.

descriptions to your points, recognize errors early so you can fix them on scene. No more fussing with total station input panels, instead you use the convenient M-FX interface.

## Use your own Hardware

M-FX works on any Pocket PC with Windows Mobile 2003 or Version 5.0. Enabling you to use your existing hardware.

## Advanced Connectivity:

Use the M-FX data collector to connect between a Total Station and FX3 using Bluetooth Wireless technology\*. M-FX supports all Total Stations currently on the market, taking the headache from transferring data.

Should your hardware not be Bluetooth enabled then you can still connect using a serial port.

This is a streamlined, integrated and powerful system to complete your investigation processes and technical reports.

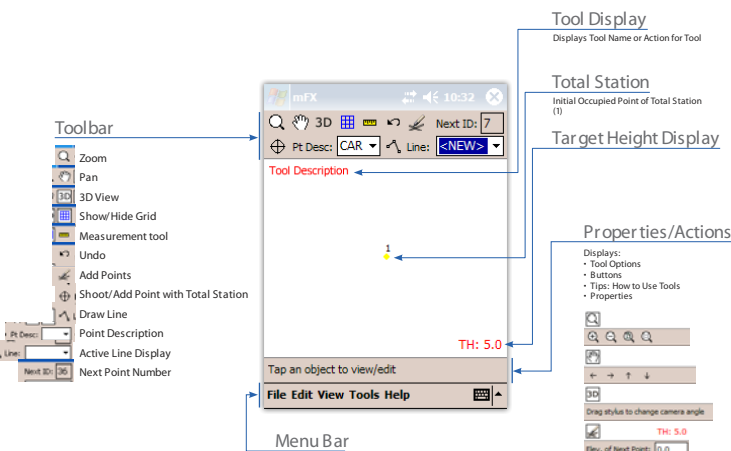

## Reposition Total Station

Repositioning your total station to shoot large scenes is easy, you have 2 options to reposition your total station. So you can keep shooting your scene with new points and existing points in one file.

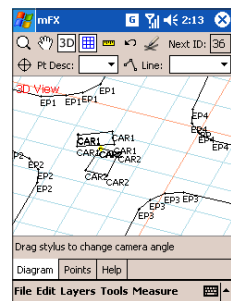

## Purpose Built Interface

The M-FX application has been built to improve efficiency and work off between Total Stations and Diagramming software (FX3).

It is designed with all functions and buttons for recon professionals in mind. It is very easy to navigate the scene you are shooting, add/edit measurement points, and rectify measurements or perform measurements on the diagram. As well as get a good preview of your scene.

It is designed with all functions and buttons for recon professionals in mind.

## Improved Workflow:

With M-FX you can see a diagram of your scene as you shoot it (in 2D or 3D from any angle); stay organized in large, complex scenes by zooming in on evidence-rich areas and adjusting detail levels. Add

\* (requires a Bluetooth enabled Total Station, Pocket PC and PC)

Every Total Station on the market is supported
