

Key Features:

- Rapid Diagramming
- Places satellite images to scale as your diagram backgrounds
- Easy to use
- Intuitive Search function

Virtual Earth is a revolutionary new component for FX3 and SmartRoads Enterprise. Microsoft® 's Virtual Earth™ technology is used for the Virtual Earth component to provide the to scale satellite imagery. Diagramming has never been this easy, and we believe it can't get any easier than this.

background of your scene, all you have to do now is place your objects such as cars etc. and you are done with an accurate diagram.

No need to hand scale images to fit the scale of your diagram, satellite photos are placed precisely to-scale every time.

Insert to-scale satellite images

At the click of a button users can access satellite imagery and select an area which will be placed to scale in FX3 or SmartRoads Enterprise – to scale!

WOW – that is state of the art.

Finding your location

Virtual Earth uses a simple search interface that makes it very easy to find the correct location, you can also zoom in to the scale you need for your diagram.

Some rural / little populated areas do not have images available in sufficient quality, in this case you can use other rapid diagramming solutions such as the SmartRoads component.

Find Location:

Search Options:

Enter a full address
To ensure the best possible match, include as much of the address as you can. Use comma separated words.

Enter a part of an address
To ensure the best possible match, include as much of the address as you can. Use comma separated words.

Enter a place name
To ensure the best possible match, include as much of the address as you can. Use comma separated words.
